Total marks (SPMP)	/100

COURSE CODE	:	DFK20013
COURSE NAME	:	WEB DESIGN TECHNOLOGY
ASSESSMENT TASK	:	**CASE STUDY**
TOPIC	:	1.0 INTRODUCTION TO WEB DEVELOPMENT AND BOOTSTRAP 2.0 HTML AND CSS ESSENTIALS WITH BOOTSTRAP
CLO 2	:	Practice effective interpersonal skills with peers in developing responsive web and mobile application using framework that can be view in web browser. (A3, PLO4)
Duration	:	4 hours

CLO	MARKS
CLO 2A	
Total marks	**/100**

INSTRUCTION:

- This task must be completed as a group consisting of 3 members recommended, maximum 4 members only.
- Your team is assigned to analyze the problem, propose improvements, and develop a responsive homepage prototype that can be viewed in a web browser.
- The following tasks must be completed by your group in order to fulfill the needs and expectations of the business owner.
- Your group is required to provide clear, organized, and verifiable evidence for each task to demonstrate that the instructions have been properly implemented.
- All evidence must be documented and submitted together with the final deliverables. Failure to provide sufficient proof of process may result in mark deduction.
- Read the given scenario and follow the task instruction. Please refer to the attached **RUBRIC** for the **MARKING SCHEME** carefully.

SCENARIO BACKGROUND:

Many small and medium businesses in Malaysia rely on websites to promote their products and services to customers. However, some websites were developed several years ago and may not follow modern web design practices, resulting in poor usability and inconsistent user experience.

Recently, a local business or organization has identified several issues with its existing website. Feedback from users indicates that the website is not optimized for mobile devices, the page layout appears inconsistent, and the navigation structure is

difficult to understand. In addition, some visual elements such as images, text sections, and content blocks are not properly aligned, which affects the overall professionalism of the website.

To address these issues, the business owner has decided to collaborate with a **Junior Web Development Team (your group)** to evaluate and improve the website interface. Your team has been assigned to conduct a **website analysis**, identify usability and layout problems, and propose improvements based on modern web development practices.

As part of the project, your team must design and develop a **responsive homepage prototype** using **HTML, CSS, and the Bootstrap framework**. The redesigned homepage should demonstrate proper layout structure, improved navigation, and responsive behaviour across multiple devices.

The client expects the redesigned homepage to meet the following requirements:

- The website must be fully responsive and accessible on desktop, tablet, and mobile devices.
- The layout should use a structured grid system to ensure proper alignment and consistency.
- The navigation menu should be clear, organized, and mobile-friendly.
- The interface design should appear modern, clean, and professional.
- The website must load correctly and display properly in a web browser environment.
- The implementation should utilize a web framework (Bootstrap) to support efficient development and maintain design consistency.

Your team is responsible for **analysing the selected website, proposing design improvements, and developing a responsive homepage prototype** that demonstrates the effective use of web development technologies.

Suggested Websites for Case Study

Students must select **one (1) website from the list provided or another similar Malaysian SME website (subject to lecturer approval)** for analysis and redesign.

No	Website	Type
1	https://haurabelle.com	Beauty / E-commerce
2	http://www.sribintang.com.my	Fashion Retail
3	https://www.kedah.gov.my	State Agency
4	http://www.hovid.com	Pharmaceutical company
5	http://www.mamee.com	Food manufacturing

6	https://www.pahangtourism.org.my	Tourism Portal
7	https://www.proton.com/	Automotive portal
8	https://www.mpc.gov.my	Government Agency
9	https://www.klia2.info	Airport information portal
10	https://www.malaysia.travel	Tourism Portal

Students are required to analyze the selected website's homepage and redesign it according to the tasks provided in this case study.

TASK1: WEBSITE ANALYSIS

Your group must conduct a comprehensive analysis of the assigned website.

You are required to:

- Evaluate the website layout on desktop, tablet, and mobile view.
- Identify structural, styling, and responsiveness issues.
- Relate your findings to the roles of HTML, CSS and Bootstrap. • Propose improvements based on web development principles.
- Screenshots of desktop and mobile testing.
- Identify a minimum of five (5) strengths and weakness of the website.
- Each strength and weakness must be clearly described and supported with a detailed explanation.

TASK 2: REDESIGN AND DEVELOPMENT ENVIRONMENT SETUP

Your group must propose an improved homepage structure that addresses the identified issues.

You are required to:

- Explain layout improvements.
- Justify the use of Bootstrap grid system and components.
- Create appropriate project folder structure.
- Develop index.html and external CSS file.
- Integrate Bootstrap using CDN.
- Link external CSS file correctly.
- Include appropriate comments within the code to enhance readability and make it easier to understand.

TASK 2.1: HTML IMPLEMENTATION

Your redesigned homepage must demonstrate proper HTML structure.

You are required to:

- Use complete HTML document structure.
- Apply semantic elements (header, nav, section, footer).
- Include navigation bar, hero section, product/service section, about section, and footer.
- Use appropriate tags and attributes.

TASK 2.2: CSS IMPLEMENTATION

Your group must apply CSS to enhance layout and readability.

You are required to:

- Demonstrate use of element, class, and ID selectors.
- Apply relevant CSS properties (margin, padding, font-size, color, backgroundcolor, text-align and etc…).
- Provide example of inline, internal, and external CSS usage.
- Improve typography and spacing.

TASK 2.3: BOOTSTRAP GRID AND COMPONENT IMPLEMENTATION

Your redesigned homepage must utilize Bootstrap framework effectively.

You are required to:

- Use container, row, and responsive column classes.
- Implement 3-column layout (desktop), 2-column layout (tablet), and 1-column layout (mobile).
- Use img-fluid for responsive images.
- Apply at least three Bootstrap components (e.g., Navbar, Card, Button).

TASK 3: RESPONSIVE TESTING

You must test your redesigned homepage using browser developer tools.

You are required to:

- Demonstrate layout responsiveness across multiple screen sizes.
- Ensure there is no horizontal scrolling.
- Ensure navigation collapses correctly on mobile.

SUBMISSION REQUIREMENT

Submission Folder Must Contain:

- index.html (main file)
- css/style.css
- images/ (project images, if any)
- Additional HTML files (about.html, info.html, contact.html)
- **Report file**

Report Must Include:

1. **Answer sheet for each part**, including:
   - Copy of coding (HTML, CSS, Bootstrap implementation)
   - Screenshots of the website output (desktop and mobile views)
2. **Group reflection write-up**, aligned with the *Conclusion / Reflection* section created on the website.

Evaluation Criteria

- Refer to the **rubric provided in the appendix** for detailed scoring components.

RUBRIK CASE STUDY			
NAME	**: 1. 2. 3. 4.**	**MATRIC NO**	**: 1. 2. 3. 4.**
COURSE	**: DFK20013 WEB DESIGN TECHNOLOGY**	**SUBMISSION DATE:**	
LEARNING OUTCOME	**: Construct a program using HTML, CSS and JavaScript in developing web and mobile application.**		

EVALUATION SCALE & DESCRIPTOR	
1 – WEAK 2 – FAIR 3 – GOOD 4 – VERY GOOD	
1	Incorrect implementation, not functional or heavy dependence on AI without understanding
2	Some errors affecting layout or functionality
3	Minor issues but still functional
4	Fully correct, complete and functional implementation

BIL	**CRITERIA / SUB CRITERIA**	**Evaluation SCALE**					**SCORE**	**WEIGHTAGE & TOTAL MARKS**
		YES				**NO**		
		1	**2**	**3**	**4**			
A	**Website Analysis (20 marks)**							
	Evaluates website layout across desktop, tablet and mobile view						/4 * 1	
	Identifies strengths and weaknesses of the website (minimum 5)						/4 * 1	
	Explains issues related to HTML structure, CSS styling and responsiveness						/4 * 1	
	Provides screenshots and evidence of testing						/4 * 1	%

	Proposes improvements based on web development principles						/4 * 1	
B	**Project Setup & Development Environment (20 marks)**							
	Creates project folder correctly						/4 * 1	
	Develops index.html and external CSS file correctly						/4 * 2	
	Integrates Bootstrap framework using CDN						/4 * 2	
	Links external CSS correctly						/4 * 1	
	Uses comments in code for readability and explanation						/4 * 1	%
C	**HTML Implementation (20 marks)**							
	Uses complete HTML document structure						/4 * 1	
	Applies semantic elements (header, nav, section, footer)						/4 * 1	
	Implements navigation bar correctly						/4 * 1	
	Creates required sections (hero, product/service, about, footer)						/4 * 1	%
	Uses appropriate HTML tags and attributes						/4 * 1	
D	**CSS Implementation (20 marks)**							
	Uses element, class and ID selectors correctly						/4 * 1	%
	Applies CSS properties (margin, padding, font-size, color)						/4 * 1	
	Demonstrates inline, internal and external CSS usage						/4 * 1	
	Improves typography, spacing and layout readability						/4 * 1	
	Applies consistently styling across the webpage						/4 * 1	
E	**Bootstrap Grid & Components Implementation (20 marks)**							
	Uses Bootstrap container, row and column grid system						/4 * 1	%
	Implements responsive layout correctly						/4 * 1	
	Uses responsive images (img-fluid) correctly						/4 * 1	
	Implements Bootstrap components (Navbar, Card, Button)						/4 * 1	
	Ensures responsive behaviour across screen sizes						/4 * 1	
JUMLAH KESELURUHAN (A+B+C+D+E)								**/ 100%**

Task 1.

DESKTOP

When viewed on a desktop screen, the Proton car website homepage displays a large hero banner at the top that highlights the latest Proton models and brand identity. The navigation bar is located at the top of the

page and contains links such as Models, Technology, Promotions, News, and other company information.

The homepage layout is divided into several sections including the hero banner, featured car models, technology highlights, and latest news or promotions. The website uses highquality images of Proton vehicles and modern design elements that make the page visually attractive and engaging for users.

However, some sections may appear slightly crowded due to the large number of vehicle images and promotional content displayed close together. This may affect visual balance and readability for some users.

MOBILE

In mobile view, the Proton car website adapts into a single-column layout to better fit smaller screen sizes. Users can scroll vertically to browse through information about Proton car models, features, and promotions on the homepage.

The car images remain clear and visually appealing, showcasing the design and details of Proton vehicles. However, some images appear quite large on mobile screens, which increases the overall page length and requires users to scroll more frequently to view all sections.

Overall, the Proton website is accessible and functional on mobile devices, but minor layout adjustments—such as optimizing image sizes and spacing—could further improve usability and provide a smoother browsing experience for users.

TABLET – Proton Car Website

When the Proton car website is viewed on a tablet device, the layout adjusts to fit the medium screen size. Images of Proton vehicles and content sections resize automatically to fit the display while maintaining good visibility.

Some sections of the website, such as vehicle highlights, specifications, and promotional banners, appear stacked vertically rather than side by side. This increases the amount of scrolling required for users to access all the information. Although the text and images remain clear and readable,

the spacing between certain elements may appear slightly inconsistent, which can affect the overall visual organization of the page.

The navigation menu remains accessible on the tablet interface, allowing users to browse different sections such as models, promotions, and services. However, the navigation experience may feel slightly less convenient compared to the desktop layout due to the limited screen space.

Identify structural, styling, and responsiveness issues.

HTML Structure Issues

The website may not fully utilize semantic HTML elements such as <header>, <nav>, <section>, and <footer>. Using semantic elements helps organize the webpage structure and improves accessibility.

CSS Styling Issues

Some alignment and spacing issues indicate that CSS styling may not be fully optimized. Proper use of CSS properties such as margin, padding, font-size and text alignment could improve layout consistency and readability.

Responsiveness Issues

The website does not fully optimize its layout across different screen sizes. Some elements appear too large on smaller devices which affects the overall responsive experience.

Using responsive design frameworks such as Bootstrap could help improve layout flexibility across desktop, tablet, and mobile devices.

Relate Findings to the Roles of HTML, CSS and Bootstrap

1. Role of HTML

HTML is responsible for creating the structure of the webpage. It organizes the content such as headings, images, navigation menus, and sections.

In the Mamee website, the page is structured into several sections such as the navigation menu, hero banner, brand showcase, and footer. However, the website could improve its structure by using more semantic HTML elements such as <header>, <nav>, <section>, and <footer>.

Using proper semantic HTML elements can improve readability, accessibility, and maintainability of the website structure.

---

2. Role of CSS

CSS is responsible for controlling the visual appearance and styling of the website. It manages elements such as colors, spacing, fonts, alignment, and layout.

In the Mamee website, CSS is used to create colourful designs, display product images, and style text sections. However, some spacing between sections appears inconsistent, which suggests that margin and padding properties may not be optimized.

Improving CSS styling could enhance the visual balance and readability of the website layout.

---

3. Role of Bootstrap

Bootstrap is a front-end framework used to create responsive and mobile-friendly layouts. It provides grid systems and ready-made components such as navigation bars, cards, and buttons.

Based on the analysis, the Mamee website could benefit from implementing Bootstrap grid systems to improve layout consistency across different screen sizes. Using Bootstrap components such as responsive navigation bars and responsive images (img-fluid) could help optimize the website for mobile devices.

This would ensure that the website adapts properly to desktop, tablet, and mobile screens.

Propose improvements based on web development principles.

Several improvements can be implemented to enhance the usability and design of the website.

1. Implement Bootstrap Grid System

The Bootstrap grid system can be used to create responsive layouts using container, row, and column classes. This helps maintain consistent alignment across different devices.

---

2. Improve Navigation Menu

A responsive Bootstrap navbar can be implemented to provide a clearer and more mobile-friendly navigation system.

---

3. Use Responsive Images

Images should use the Bootstrap class img-fluid so that they automatically resize according to screen size.

---

4. Improve Typography and Spacing

Applying consistent CSS styling such as margin, padding, and font-size will improve readability and visual balance.

---

5. Organize Page Layout

The homepage structure can be improved using a clear layout structure such as:

- Header
- Navigation Bar
- Hero Section
- Product / Brand Section
- About Section
- Footer

This structure will improve user navigation and overall website organization.

Strengths	Detailed Explanation
Visual Branding	The website uses bright colors and high-quality product images that match the snack food industry. This helps attract users' attention and strengthens the brand identity.
Mobile Navigation	The hamburger menu design is simple and intuitive, allowing users to easily access different pages when using mobile devices.
Responsive Grids	Product listings automatically adjust across different screen sizes using CSS Flexbox or Grid layout, ensuring a consistent and organized display on desktop, tablet, and mobile devices.
Fast Visual Feedback	Interactive elements such as buttons and links provide clear hover and active effects. This gives immediate feedback to users, confirming that their
	actions have been recognized by the system.

Multilingual Support	The website provides multiple language options, making the content accessible to users from different regions and improving overall user experience.

Weaknesses	Detailed Explanation
Page Load Speed	Some images and media files are not fully optimized, which can increase page loading time, especially for users accessing the website through mobile data connections.
Content Hierarchy	Certain promotional banners use multiple fonts and visual elements that compete for attention. This makes it difficult for users to quickly identify the main Call-to-Action (CTA).
Empty Space	On larger or ultra-wide screens, some sections appear stretched and leave excessive white space, making the layout look less balanced.
Accessibility Issues	Text placed over complex or colorful background images can sometimes be difficult to read. Adding a semi-

	transparent overlay or improving contrast could enhance readability.
Deep Navigation	Some brand-specific information requires several clicks from the homepage, which may reduce usability and make it harder for users to find important content quickly.
